

Mark Scheme (Results)

Summer 2026

Pearson Edexcel International Advanced Level in Accounting
WAC12/01

Unit 2: Corporate and Management Accounting

Edexcel and BTEC Qualifications

Edexcel and BTEC qualifications are awarded by Pearson, the UK's largest awarding body. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at www.edexcel.com or www.btec.co.uk. Alternatively, you can get in touch with us using the details on our contact us page at www.edexcel.com/contactus

Pearson: helping people progress, everywhere

Pearson aspires to be the world's leading learning company. Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: www.pearson.com/uk

General Marking Guidance

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.

Q1 Mark scheme

(a)

(i)AO1(1) AO2 (4)

AO1: One mark for correct formula stated.

AO2 : Four marks for correct for correct calculation of dividend paid per ordinary share.

$$\text{Dividend paid per share} = \frac{\text{Total ordinary dividend}}{\text{Issued ordinary shares}} \quad (1)\text{AO1}$$

$$\text{Final dividend} = (£20\,000\,000 \times 0.0125) = £250\,000$$

$$= \frac{£250\,000(1)\text{AO2} + £190\,000(1)\text{AO2}}{20\,000\,000(1)\text{AO2}} = £0.022 \text{ (2.2 pence) per share}(1\text{o/f})\text{AO2}$$

(5)

(ii)AO1 (4)

AO1: Four marks for correct formula, correct insertion of market price of share and dividend per share and for correct calculation of dividend yield.

$$\text{Dividend yield} = \frac{\text{Dividend per share}}{\text{Market price of share}} \times 100 \quad (1)\text{AO1}$$

$$= \frac{£0.022\text{p}(1\text{o/f})\text{AO1}}{£0.73\text{p}(1)\text{AO1}} \times 100 = 3.01\% (1\text{o/f})\text{AO1}$$

(4)

(iii) AO1(1) AO2 (5)

AO1: One mark for correct formula stated.

AO2 : Three marks for correct insertion of net profit after tax and of ordinary shares issued, and correct calculation of earnings per ordinary share.

$$\text{Earnings per ordinary share} = \frac{\text{Net profit after tax} - \text{Irredeemable preference dividend}}{\text{Issued ordinary shares}} \quad (1)\text{AO1}$$

$$\text{Net profit after tax} = (£2\,650\,000 - £520\,000) = £2\,130\,000 \quad (1)\text{AO2}$$

$$\text{Irredeemable Preference dividend} = (£10\,000\,000 \times 0.065) = £650\,000 \quad (1)\text{AO2}$$

$$\text{Earnings per ordinary share} = \frac{£2\,130\,000 - £650\,000(1)\text{AO2}}{20\,000\,000(1)\text{AO2}} \text{ both} = 7.4 \text{ pence per share} \quad (1\text{o/f})\text{AO2}$$

(6)

ALSO ACCEPTABLE

$$\text{Earnings per ordinary share} = \frac{\text{Net profit after tax} - \text{All preference dividends}}{\text{Issued ordinary shares}} \quad (1)\text{AO1}$$

$$\text{Net profit after tax} = (£2\,650\,000 - £520\,000) = £2\,130\,000 \quad (1)\text{AO2}$$

$$\text{Irredeemable Preference dividend} = (£10\,000\,000 \times 0.065) = £650\,000$$

$$\text{Redeemable Preference dividend} = (£5\,000\,000 \times 0.06) = £300\,000$$

Earnings per ordinary share

$$= \frac{£2\,130\,000(1)\text{AO2} - £650\,000 - £300\,000(1)\text{AO2}}{20\,000\,000(1)\text{AO2}} = 5.9 \text{ pence per share} (1\text{o/f})\text{AO2}$$

(iv) AO1 (4)

AO1 : Four marks for correct stating of formula, correct insertion of market price of share and earnings per share and for correct calculation of price/earnings ratio.

$$\begin{aligned}\text{Price/earnings ratio} &= \frac{\text{Market price of share}}{\text{Earnings per share}} \quad (1)\text{AO1} \\ &= \frac{\pounds 0.73 \text{ (73p)} (1)\text{AO1}}{7.4\text{p (1o/f)}\text{AO1}} = 9.86 \text{ times (1o/f)}\text{AO1} \\ &\quad (4)\end{aligned}$$

ALSO ACCEPTABLE

$$\begin{aligned}\text{Price/earnings ratio} &= \frac{\text{Market price of share}}{\text{Earnings per share}} \quad (1)\text{AO1} \\ &= \frac{\pounds 0.73 \text{ (73p)} (1)\text{AO1}}{5.9\text{p (1o/f)}\text{AO1}} = 12.37 \text{ times (1o/f)}\text{AO1} \\ &\quad (4)\end{aligned}$$

(v) AO1 (2) AO2 (2)

AO1 : Two marks for correct stating of formula and correct insertion of total ordinary dividend.

AO2 : Two marks for correct for correct insertion of net profit after tax less preference dividends and calculation of dividend cover.

$$\begin{aligned}\text{Dividend cover} &= \frac{\text{Net profit after tax - irredeemable preference dividend}}{\text{Total ordinary dividend}} \quad (1)\text{AO1} \\ &= \frac{\pounds 2\,130\,000 - \pounds 650\,000 (1\text{o/f})\text{AO2 both}}{\pounds 250\,000 + \pounds 190\,000 (1\text{o/f})\text{AO1 both}} = 3.36 \text{ times (1o/f)} \text{AO2} \\ &\quad (4)\end{aligned}$$

ALSO ACCEPTABLE

$$\begin{aligned}\text{Dividend cover} &= \frac{\text{Net profit after tax - All preference dividends}}{\text{Total ordinary dividend}} \quad (1)\text{AO1} \\ &= \frac{\pounds 2\,130\,000 - \pounds 650\,000 - \pounds 300\,000 (1\text{o/f})\text{AO2}}{\pounds 250\,000 + \pounds 190\,000 (1\text{o/f})\text{AO1}} = 2.68 \text{ times AO2} \\ &\quad (4)\end{aligned}$$

(vi) AO1(1) AO2(9) AO3(2)

AO1: One mark for correct formula stated.

AO2: Nine marks for correct insertion of debenture, bank loan, ordinary shares, retained earnings, general reserve and foreign exchange reserve, revaluation reserve, total debt, total equity and calculation of gearing ratio.

AO3: Two marks for correct inclusion of redeemable preference shares and irredeemable preference shares.

$$\begin{aligned}\text{Gearing ratio} &= \frac{\text{Fixed Cost Capital (Debt)}}{\text{Capital employed (Debt + Equity)}} \times 100 \quad (1)\text{AO1} \\ \text{Debt} &= \pounds 5\,000\,000 (1)\text{AO3} + \pounds 10\,000\,000 (1)\text{AO2} + \pounds 1\,800\,000 (1)\text{AO2} = \pounds 16\,800\,000 \\ \text{Equity} &= \pounds 24\,000\,000 (1)\text{AO2} + \pounds 10\,000\,000 (1)\text{AO3} - \pounds 1\,350\,000 (1)\text{AO2} + \pounds 500\,000 + \pounds 800\,000 \text{ both } (1)\text{AO2} \\ &\quad + \pounds 1\,000\,000 (1)\text{AO2} = \pounds 34\,950\,000 \\ &= \frac{\pounds 16\,800\,000 \times 100 (1\text{o/f})\text{AO2}}{\pounds 51\,750\,000 (1\text{o/f})\text{AO2}} = 32.46\% (1\text{o/f})\text{AO2} \\ &\quad (12)\end{aligned}$$

ALSO ACCEPTABLE

$$\begin{aligned} \text{Gearing ratio} &= \frac{\text{Fixed Cost Capital (Debt)}}{\text{Capital employed (Debt + Equity)}} \times 100 \quad (1)\text{AO1} \\ \text{Debt} &= £5\,000\,000 \quad (1)\text{AO3} + £10\,000\,000 \quad (1)\text{AO3} + £10\,000\,000 \quad (1)\text{AO2} + £1\,800\,000 \quad (1)\text{AO2} = £26\,800\,000 \\ \text{Equity} &= £24\,000\,000 \quad (1)\text{AO2} - £1\,350\,000 \quad (1)\text{AO2} + £500\,000 + £800\,000 \text{ both } (1)\text{AO2} \\ &+ £1\,000\,000 \quad (1)\text{AO2} = £34\,950\,000 \\ &= \frac{£26\,800\,000 \quad (1\text{o/f})\text{AO2}}{£51\,750\,000 \quad (1\text{o/f})\text{AO2}} = 51.79\% \quad (1\text{o/f})\text{AO2} \end{aligned} \quad (12)$$

(vii) AO1(1) AO2(3) AO3(4)

AO1: One mark for correct formula stated.

AO2: Three marks for correct insertion of net profit before interest and tax and capital employed and calculation of return on capital employed.

AO3: Four marks for correct insertion of net profit after interest before tax, correct calculation of interest to add back on debenture, bank loan, and redeemable preference shares.

$$\begin{aligned} \text{Return on Capital employed} &= \frac{\text{Net profit before interest and tax}}{\text{Capital employed}} \times 100 \quad (1)\text{AO1} \\ \text{Net profit after interest before tax} &= £2\,650\,000 \quad (1)\text{AO3} \\ \text{Interest on debenture} &= (£10\,000\,000 \times 12\%) = £1\,200\,000 \quad (1)\text{AO3} \\ \text{Interest on bank loan} &= (£1\,800\,000 \times 13\%) = £234\,000 \quad (1)\text{AO3} \\ \text{Interest on redeemable preference shares} &= (5 \text{ million} \times £1.00 \times 6\%) = £300\,000 \quad (1)\text{AO3} \\ \text{Net profit before interest and tax} &= £4\,384\,000 \\ &= \frac{£4\,384\,000 \quad (1\text{o/f})\text{AO2}}{£51\,750\,000 \quad (1\text{o/f})\text{AO2}} \times 100 = 8.47\% \quad (1\text{o/f})\text{AO2} \end{aligned} \quad (8)$$

ALSO ACCEPTABLE

$$\begin{aligned} \text{Return on Capital employed} &= \frac{\text{Net profit before interest and tax}}{\text{Capital employed}} \times 100 \quad (1)\text{AO1} \\ \text{Net profit after interest before tax} &= £2\,650\,000 \quad (1)\text{AO3} \\ \text{Interest on debenture} &= (£10\,000\,000 \times 12\%) = £1\,200\,000 \quad (1)\text{AO3} \\ \text{Interest on bank loan} &= (£1\,800\,000 \times 13\%) = £234\,000 \quad (1)\text{AO3} \\ \text{Net profit before interest and tax} &= £4\,084\,000 \quad (1)\text{AO3} \\ &= \frac{£4\,084\,000 \quad (1\text{o/f})\text{AO2}}{£51\,750\,000 \quad (1\text{o/f})\text{AO2}} \times 100 = 7.89\% \quad (1\text{o/f})\text{AO2} \end{aligned} \quad (8)$$

(b) (A01)1 (A02)1 (A03)4 (A04)6

Own figure rule applies throughout answer.

Answers may include:

Good performance

The dividend yield is 3.01%. This could be quite similar to what could be earned by placing in a deposit account. A dividend yield of between 2% and 6% is considered attractive.

However, an investor is also concerned with the movement of the share price - does the share price move up or down? We are not given any information that tell us if the share price has moved up or down.

The earnings per share is often regarded as the most important ratio of a company. For Atraixy Industrials plc, a figure 7.4 pence per share looks healthy. Especially as it appears that in previous years, a loss had been made.

Dividend cover tells investors how many times the net profit after tax less irredeemable preference dividend covers the ordinary dividends being paid out. A low figure shows a generous dividend policy (or a low profit). A high figure shows a dividend policy that is not generous (or a high profit). The market views a dividend cover ratio of 2 to be good. A ratio of below 1.5 may give cause for concern. The figure of 3.36 for Atraixy shows the company is being cautious with its dividend policy and not handing out large dividends.

Gearing is 32% which is inside the recommended boundaries for "good". These boundaries are between 25% and 50%. The company could take out more loans in the future if they want to.

Not easy to categorise

Dividend per share is 2.2 pence per share.

By itself, the figure means little. The market is more concerned with dividend yield, which relates dividends to the market price. An investor needs to relate this figure to the amount they paid for the share - the dividend yield.

Return on capital employed was 8.47% for the year just ended. This is a reasonable return. An investor would be unlikely to achieve a return of 8% if they invested in a bank deposit account. However, some markets consider a return to be good if it is above 15%. This figure often depends upon the industry the company is in.

Poor performance

The Price/earnings ratio was 9.86 times. The market considers a ratio of 20 to 25 as average. Below 20 to 25 the market considers the share undervalued. However, there could be a reason why the share price is low. One possibility is that in recent years, the company has made losses not profits. This is shown by the Retained earnings account having a debit balance,

Conclusion

It appears that the performance of Atraixy Industrials plc was quite good, as shown by many of the ratios.

However, retained earnings is a debit balance and the market is still cautious as the Price/earnings ratio is low.

Level	Mark	Descriptor
	0	A completely incorrect response.
Level 1	1-3	Isolated elements of knowledge and understanding which are recall based. Weak or no relevant application to the scenario set. Generic assertions may be present.
Level 2	4-6	Elements of knowledge and understanding, which may be applied to the scenario. Chains of reasoning are present but may be incomplete or invalid. A generic or superficial assessment is present.
Level 3	7-9	Accurate and thorough understanding, supported by relevant application to the scenario. Some analytical perspectives are present, with developed chains of reasoning, showing causes and/or effects. An attempt at an assessment is presented, using financial and maybe non-financial information, in an appropriate format and communicates reasoned explanations.
Level 4	10-12	Accurate and thorough knowledge and understanding, supported throughout by relevant application to the scenario. A coherent and logical chain of reasoning, showing causes and effects. Assessment is balanced, wide ranging and well contextualised using financial and maybe non-financial information and makes an informed decision.

12 marks

Total for Question 1 - 55 marks

Q2 Mark scheme

(a)(i)(A01) 10 (A02) 6				
A01: One mark for each fixed cost and total fixed costs.				
One mark for each variable cost, except power and royalties which are worth one together,				
and one mark for total variable cost per unit.				
A02: Three marks for calculation of contribution per unit.				
Three marks for calculation of break-even point in units.				

Fixed costs	£		
Business rates	23 400	(1)A01	
Managers salaries	19 200	(1)A01	
Other Fixed costs	7 200	(1)A01	
Power	36 000	(1)A01	
Total fixed costs	85 800	(1o/f)A01	
Variable costs per unit	£

Power	0.02			
Total variable costs per unit	1.20	(1)AO2		
Total variable costs	(80 000 x £1.20)	= £96 000	(1o/f)AO2	
Total fixed and variable costs		£176 000	(1o/f)AO2	(15)

(e) AO1 (1) AO2 (1) AO3 (4) AO4 (6)

All figures are own figures.

Case for Producing Sponge cakes

Variable costs per unit for producing sponge cakes are £1.05 which is lower than fruit pies whose variable costs are £1.20. The difference is £0.15 per item.

Total costs for producing sponge cakes are £163 234 which is lower than total costs for producing fruit pies which are £176 000. The difference is £12 766.

The contribution of one sponge cake is £1.60. Total contribution is £117 600. This is £5 600 more than the contribution of fruit pies. Fruit pies contribution is £1.40 per pie giving a total contribution of £112 000.

The break-even point for sponge cakes is 53 625 units, which is lower than the break-even point for fruit pies which is 57 142 units. The difference is 3 517 units.

Only 98% of sponge cakes are predicted to be sold. This means that 2% will be in inventory which will be available should there be an increase in demand, or an underestimation of predicted sales figures.

Case for Producing Fruit pies

Fixed costs are £80 000 per year which is lower than sponge cakes fixed costs which are £85 800. The difference is £5 800.

Revenue of £208 000 is greater than the revenue from sponge cakes which is £194 775. The difference is £13 225.

Fruit pies have a margin of safety of $80\,000 - 57\,142 = 22\,858$. This is greater than the margin of safety of sponge cakes which is $73\,500 - 53\,625 = 19\,875$.

The profit for producing fruit pies is £32 000 which is greater than the profit for producing sponge cakes which is £31 541. The difference is £459.

100% of fruit pies are predicted to be sold. It is good to sell all of production. This especially applies to foodstuffs that may see their condition deteriorate quite rapidly. It also means that there are no storage costs required.

Other Points

All the figures for costs and revenues are estimates for the future. It is not known how accurate these estimates are.

Conclusion

The most important figure is the figure for profit. This would mean that producing fruit pies would be the best option if the figures are correct estimates.

Level	Mark	Descriptor
	0	A completely incorrect response.
Level 1	1 - 3	Isolated elements of knowledge and understanding which are recall based. Weak or no relevant application to the scenario set. Generic assertions may be present.
Level 2	4 - 6	Elements of knowledge and understanding, which may be applied to the scenario. Chains of reasoning are present, but may be incomplete or invalid. A generic or superficial assessment is present.
Level 3	7 - 9	Accurate and thorough understanding, supported by relevant application to the scenario. Some analytical perspectives are present, with developed chains of reasoning, showing causes and/or effects. An attempt at an assessment is presented, using financial information in an appropriate format and communicates reasoned explanations.
Level 4	10 - 12	Accurate and thorough knowledge and understanding, supported throughout by relevant application to the scenario. A coherent and logical chain of reasoning, showing causes and effects. Assessment is balanced, wide ranging and well contextualised using financial information and makes an informed decision.

12 marks

Total for Question 2 = 55 marks

Q3 Mark Scheme

(a) (AO1) 5 (AO2) 2

AO1: Five marks for correct calculation of book value of company, adjustments for fixtures and fittings, patent, inventory and value of company after adjustments.

AO2 : Two marks for calculations of property and computers.

Calculation of value of QHP plc

	(£000)	
Book value of company	6 320	(1) AO1
Revaluations		
Property, plant and equipment	960	(1) AO2
Computers	(210)	(1) AO2
Fixtures and Fittings	(40)	(1) AO1
Patent	(25)	(1) AO1
Inventory	5	(1) AO1
Value of QHP plc	7 010	(1o/f) AO1

(7)

(b) (AO2) 4

AO2: Four marks for correct calculation of value of offer.

Number of shares in QHP plc = $\frac{4\,800\,000}{0.8}$ (1) AO2 = 6 000 000 shares (1) AO2
(1) AO2

Value of offer = 6 000 000 x £1.37 = £8 220 000 (1o/f) AO2

(4)

(c) (AO2) 3

AO2 : Three marks for correct calculation of goodwill.

Calculation of goodwill

Value of offer	£8 220 000	(1o/f) AO2
Value of QHP plc	£7 010 000	(1o/f) AO2
Goodwill	£1 210 000	(1o/f) AO2

(3)

(d) (AO3) 4

AO3 : Four marks (2 marks per reason) for explaining why goodwill has been paid.

Reasons for willing to pay goodwill.

Goodwill sees the amount of the sum offered be higher than the book value of QHP. (1) AO3
This would make the offer more likely to be accepted. (1) AO3

QHP plc are likely to have a large number of existing customers (1) AO3 and StayKlean plc will be able to take these customers on board without advertising campaigns etc (1) AO3

StayKlean plc should gain from economies of scale (1) AO3 for example managerial economies, only having one director/manager for eg Personnel for the one company, not two. (1) AO3

(4)

(e) (AO2) 1 (AO3) 3

AO2: One mark for calculating the number of shares by the value of each share.

AO3: Three marks for workings in calculating the value of the offer.

Value of offer:

10 shares in QHP plc receive 4 shares in ShinyGlitter plc trading at £1.00 plus £2.50 premium a share.

So, ShinyGlitter shares are trading at £3.50 a share (1) AO3

4 shares at £3.50 = £14.00 (1o/f) AO3

Therefore, one share in QHP plc is valued at $\frac{£14.00}{10} = £1.40$ (1o/f) **A03**

Total value of offer = 6 000 000 (o/f) $\times$ £1.40 = £8 400 000 (1o/f) **A02**

(f) (A02) 2

A02: Two marks for calculating the trading value of the shares received in ShinyGlitter plc.

Ahmad has 180 shares $\div$ 10 = 18 lots

18 lots $\times$ 4 = 72 shares in ShinyGlitter plc (1) **A02**

72 shares trading at £3.50 a share = £252 in total. (1o/f) **A02**

(g) (A02) 1 (A03) 2 (A04) 3

Answers may include:

In favour of StayKlean plc

Ahmad would receive £1.37 guaranteed cash per share.

He could then invest this and earn more returns on his cash if he wished.

Ahmad could spend the cash now if he wanted to.

The shares in ShinyGlitter plc may fall in value over time.

In favour of ShinyGlitter plc

Ahmad would receive the equivalent of £1.40 (o/f) for each share he held in QHP plc.

This is 3p (o/f) a share more than the offer from StayKlean plc.

He receives shares in ShinyGlitter plc and these shares may rise in value over time. The shares may also give dividends in the future.

If Ahmad decided to invest his cash in another company, the company's shares may fall in value.

Conclusion

Candidates may put forward a valid argument in favour of either option.

Level	Mark	Descriptor
	0	A completely incorrect response.
Level 1	1-2	Isolated elements of knowledge and understanding that are recall based. Generic assertions may be present. Weak or no relevant application to the scenario set.
Level 2	3-4	Elements of knowledge and understanding, which are applied to the scenario. Some analysis is present, with developed chains of reasoning, showing causes and/or effects applied to the scenario, although these may be incomplete or invalid. An attempt at an evaluation is presented, using financial and perhaps non-financial information, with a decision.
Level 3	5-6	Accurate and thorough knowledge and understanding. Application to the scenario is relevant and effective. A coherent and logical chain of reasoning, showing causes and effects is present. Evaluation is balanced and wide-ranging, using financial and perhaps non-financial information and an appropriate decision is made.

Q4a to be integrated from the Excel file.

(b) (AO3) 6

AO3: Six marks for calculating the internal rate of return

Internal rate of Return

$$= \text{Lower rate} + (\% \text{ difference between rates}) \times \frac{(\text{NPV using lower \% rate})}{(\text{Difference between NPVs})}$$

$$= 8\% (1) \text{AO3} + (14 - 8) (1) \text{AO3} \times \frac{(19\ 160) (10/f) \text{AO3}}{(19\ 160) (10/f) \text{AO3} + 31\ 565) \text{AO3}}$$

$$= 8\% + (6 \times 0.377 \text{ o/f})$$

$$= 10.262\% (10/f) \text{AO3}$$

6 marks

(c) (AO2) 1 (AO3) 2 (AO4) 3

Answers may include:

Case For Investment

The tennis courts have a positive net present value of £19 159 using a funding rate of 7%, which presumably the council may obtain.

The internal rate of return is 10.262% which is higher than the funding rate of 7%.

The investment will provide sporting facilities for the population of Binghamton which they can enjoy using.

The sporting facilities will help improve the health of the local residents. This will also possibly reduce the amount of money the council has to spend on healthcare facilities.

Case Against Investment

This money could be spent on other projects by the council.

The figures are only estimates. The number of people using the facilities may be less than predicted.

Other points

Are there any other projects that the £150 000 may be invested in? These may include projects for other sports eg a running track or a gymnasium. Or they could be non-sporting projects eg social care or theatre.

Do these other projects give a better (or worse) return?

Decision

Candidates may conclude that the project should / should not go ahead.

Candidates should support the conclusion with the appropriate rationale.

(b) (A03) 2

A03: One mark for each difference.

Two ways a bonus issue of ordinary shares differs to a rights issue of ordinary shares:

- A bonus issue sees no money paid for the shares but a rights issue involves payment.
- A bonus issue is issued to existing shareholders but a rights issue could involve new shareholders who are not registered shareholders at present.

(2)

(c) (AO3) 1

AO3: One mark for a similarity.

One way a bonus issue of ordinary shares is the same as a rights issue of ordinary shares:

- Both issues will entitle the holder of the new shares to more votes.

(1)

(d) (AO2) 1 (AO3) 2 (AO3) 3

Advantages to the company

The company can raise capital. This could be used to expand the company, invest in new opportunities etc.

Company may need funds to pay off debts.

The company may appear to be a larger company, this may attract new investors.

A larger company may benefit from borrowing from banks at a lower interest rate.

Disadvantages to the company

Issuing more shares involves more fees and expenses eg broker's fees and possibly bank charges.

If the market does not think the value of the company has risen, the value of each share will go down as there are more shares in issue.

Having more shares in issue, could involve having to pay out more in dividends.

Conclusion

Candidates may argue and conclude that it is a good or a bad idea for a company to issue more shares.

Level	Mark	Descriptor
	0	A completely incorrect response.

Total for Question 5 - 30 marks

6(a)

(AO1) 5 (AO2) 12 (AO3) 7

AO1: Five marks for calculating sales revenue, value of opening inventory, and units of production.

AO2: Twelve marks for calculating direct materials, direct labour, semi-variable costs (variable), closing inventory units, variable cost of sales, contribution, semi-variable costs (fixed), fixed overheads, total costs, and net profit.

AO3 : Seven marks for calculating value of closing inventory for both methods.

W(1)

Sales = $(300 + 180) = 480 \times 48 \text{ weeks} = 23\,040 \text{ units (1)AO1}$

Sales revenue = $23\,040 \times £49 = £1\,128\,960 \text{ (1o/f)AO1}$

W(2)

Opening inventory

Marginal = $1\,000 \text{ units} \times £27 = £27\,000$

Absorption = $1.000 \times £33 = £33\,000 \text{ (1)AO1 both}$

W(3)

Production = $12 \text{ per hour} \times 8 \text{ hours} \times 5 \text{ days} \times 48 \text{ weeks (1)AO1}$

= $23\,040 \text{ units (1o/f)AO1}$

W(4)

Closing inventory units = Opening inventory + Production - Sales units

= $1\,000 + 23\,040 - 23\,040 \text{ (1o/f)AO2} = 1\,000 \text{ units (1o/f)AO2}$

W(5)

Value of closing inventory -

Marginal costing

Variable overhead = £8.70

Direct materials = £11.20 (1)AO3 both

Direct labour = £9.45 (1)AO3

= $£29.35 \times 1\,000 = £29\,350 \text{ (1o/f)AO3}$

Absorption costing

Semi variable costs = $£720 \times 48 = £34\,560 \div 23\,040 \text{ (o/f)} = £1.50 \text{ (1o/f)AO3}$

Fixed overheads = $£9\,600 \times 12 = £115\,200 \div 23\,040 \text{ (o/f)} = £5.00 \text{ (1o/f)AO3}$

Plus variable costs = £29.35 (o/f)

Total closing inventory absorption costing unit = £35.85 (1o/f)AO3

Total closing inventory absorption 1 000 units = £35 850 (1o/f)AO3

	<u>Marginal Costing</u>	<u>Absorption Costing</u>	
	£	£	
Revenue	1 128 960	1 128 960	W(1)
Less cost of sales			
Opening inventory	27 000	33 000	W(2)
Direct materials	258 048	258 048	(1)AO2
Direct labour	217 728	217 728	(1)AO2
Semi-variable costs (Variable)	200 448	200 448	(1)AO2
Less closing inventory	(29 350)	(35 850)	W(4)+(5)
Variable cost of sales	673 874		(1o/f)AO2
Contribution	455 086		(1o/f)AO2
Semi-variable costs (Fixed)	34 560	34 560	(1)AO2
Fixed overheads	115 200	115 200	(1)AO2
Total costs	823 634	823 134	(1o/f)AO2
Profit for the year	305 326	305 826	
	(1o/f)AO2	(1o/f)AO2	

24 marks

(b) (AO2) 1 (AO3) 2 (AO4) 3

For producing accounts using the two methods

The company has the same levels of inventory at the start and the end of the year. This could make the two profits quite similar. This may not always be the case.

The figures for inventory are relatively small compared to other expenses for the company. This could make the two profits quite similar. This may not always be the case.

Both methods have advantages, for example:

Marginal costing:

- Helps decision making eg make or buy
- Costs are allocated to a time period, so profit for that time period is accurate.
- Follows the prudence concept

Absorption costing:

- Sees costs allocated to products, which is good for fixing prices.
- Recommended by SSAP 9/ IAS 2 / FRS 102 for external accounts.
- Follows the matching concept.

Against producing accounts using the two methods

Both methods have disadvantages, for example:

Marginal costing:

- Not recommended by SSAP 9 or IAS 2 as it may not give a true and fair view.
- Not all costs are allocated to the products, so not suitable for fixing prices in the long run.

Absorption costing:

- All costs are not allocated to the time period in which they are incurred.
- Does not follow the prudence concept.

Conclusion

It is probably worth preparing accounts using the two bases.

Level	Mark	Descriptor
	0	A completely incorrect response.
Level 1	1-2	Isolated elements of knowledge and understanding that are recall based. Generic assertions may be present. Weak or no relevant application to the scenario set.
Level 2	3-4	Elements of knowledge and understanding, which are applied to the scenario. Some analysis is present, with developed chains of reasoning, showing causes and/or effects applied to the scenario, although these may be incomplete or invalid.
